

**IN THE CLAIMS:**

Claims 21-36 are currently pending.

Please amend claims 21 and 35 as follows:

21. (Amended) An image processing device which displays an image of which an object is captured from a viewpoint in a virtual space, comprising:

presentation control means for controlling presentation of the image containing the object which changes in shape;

viewpoint determining means for determining a position of the viewpoint for capturing the image containing the object, wherein the viewpoint corresponds to a virtual camera that captures motion of the object, and wherein the position of the viewpoint is determined based on a player's operation; and

recording means for recording the image obtained from the viewpoint determined by the viewpoint determining means.

35. (Amended) An image processing method for displaying a prescribed object while changing the shape of the object, comprising:

a presentation control step for controlling presentation of an image containing the object which changes in shape;

a viewpoint determining step for determining a position of a viewpoint for capturing the image containing the object, wherein the viewpoint corresponds to a virtual camera that captures motion of the object, and wherein the position of the viewpoint is determined based on a player's operation; and

a recording step for recording images obtained from the viewpoint determined by the viewpoint determining step.
